## Introducing NFS-320SYS Bundle Kits

April 6, 2015

In response to input from our Engineered Systems Distributors NOTIFIER is pleased to introduce **NFS-320SYS Bundle Kits**. These kits are ideal for both conventional fire alarm panel retrofit applications and new addressable/conventional system applications. By bundling the parts into a kit, we can offer an additional discount compared with ordering the included equipment individually. They include a CPU-320SYS along with an enclosure, dress panels and various accessories in a convenient single orderable part number.

- **BK-320-B** provides up to 16 input points
- **BK-320-C** provides up to 38 input points with 6 Form C relays.

In retrofit applications these kits allow you to upgrade both existing NOTIFIER conventional panels as well as competitive conventional panels. For new applications these kits provide a cost effective initial solution utilizing conventional detectors. In either application, the kits provide an easy migration path to a full addressable ONYX system allowing you to offer your customers the opportunity to take advantage of the latest features and devices, such as Detector Maintenance Reports, IntelliQuad and Intelligent FFAST.

### Ordering Information

#### **BK-320-B (-FR)**

Bundle kit, 6 two wire detector zones; 10 contact zones bundle kits consists of the following:

Qty	Material	Description
1	CPU-320SYS	Central processing unit for with integral 120V power supply; Includes chassis and 80-character display keypad.
1	ACM-24AT	Annunciator Module; 24 Alarm and Trouble LEDs
1	BMP-1	Blank module dress plate; used to cover annunciator positions.
